

## Introduction of the PACIFIC - System

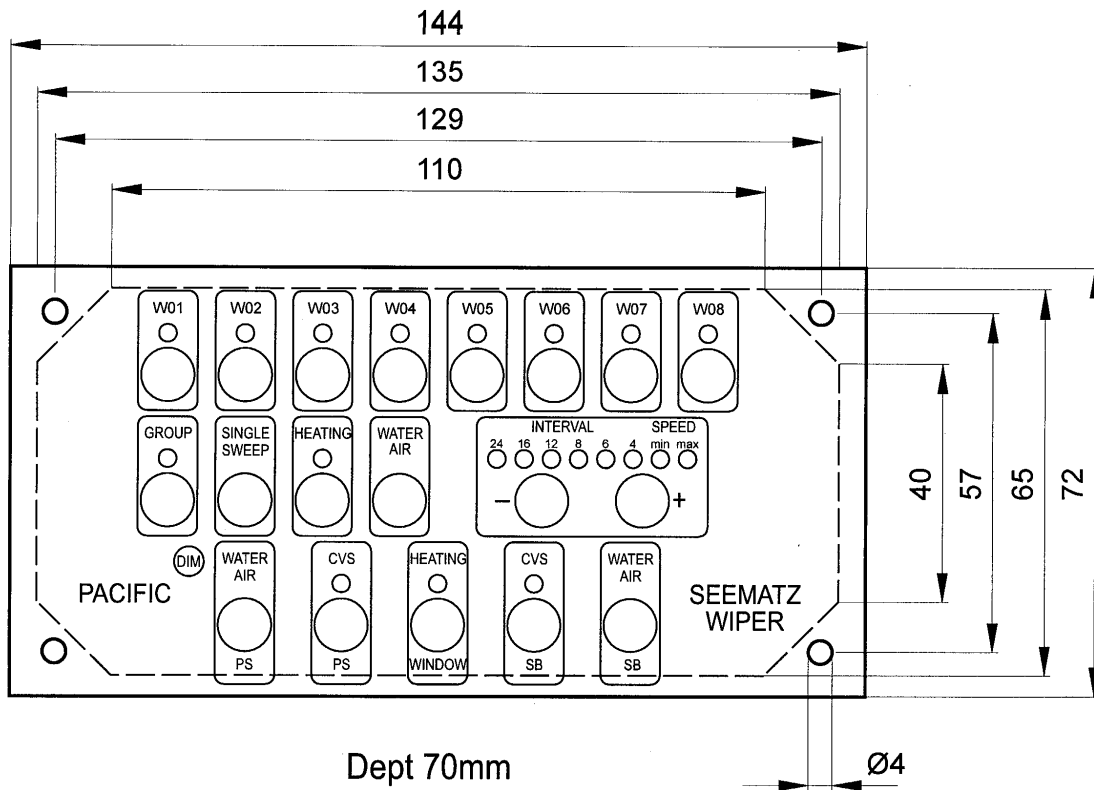

The Pacific steering works with the same wipers like the Atlantic or Ocean system.

The first advantage is the easy and safe connecting system between the Power Supply Unit and the Control Panel. Instead of several SUB-D cables with 9 or 25pol's only one PATCH cable is necessary.

The second advantage is the possibility to connect several Slave panel only via a additional PATCH cable.

The third advantage is that the Panel size are much smaller than on they other systems. Panel 144 x 72mm = max 8 wipers & 5 special functions #  
Panel 144 x 144mm = max 24 wipers & 10 special functions.

The fourth advantage is the very simple connection to a standard PC or any other electronic system which works under WINDOWS. The necessary program which make it possible to control the same functions like on the control panels will be deliver without additional cost if the customer do not want a „normal“ Panel.
